

BEACON Signal Light

The BEACON signal light comes in the standard beltpack format and serves as an optical indicator for incoming communications, either a call, or a warning/go cue indication. In addition, the BEACON signal light can also be used as a blue luminous passing light.

Configuration can be achieved simply and quickly on the device itself. Copying the system configuration and pairing the BEACON signal light with a user or group is also possible, via the red button on the rear of the unit.
